Omegamatic Re-Dress Kits

We specialize in the supply of the Omegamatic ReDress Kit for many Eastern European customers. These kits are compatible with Packers manufactured by several different companies.

With over 2000 kits supplied, we know our success is based on customer satisfaction and we only supply premium components packaged in a service friendly kit.

Features

The batch test reports are filed for traceability and ensure we maintain our high quality control of the rubber components supplied in our kits

We use only reputable Western Steel manufacturers for all our metal components

Inconel X-750 material is used for the button slip spring. By using the highest grade material available for this critical component, we are confident that under extreme load conditions that our slip springs will retain it's memory and retract the releasing slip to unseat the packer successfully.

Our standard kits contain all the necessary main sealing components, screws and springs
