

FEATURES

- Enclosed in insulated, 20-foot metal containers
- Containers have adjustable louvers
- Doors on side and in back
- Engine equipped with oil pan, coolant heaters and ambient air pressure sensor
- Battery in lockable box and equipped with warmer
- De-Icer Injector
- Fuel and Hydraulic tank heaters

Logan's Arctic Weather 85-Ton and 120-Ton Power Swivels are enclosed in insulated, 20-foot metal containers. The containers have adjustable louvers to allow operation in warmer temperatures. Two bi-fold doors on one side and double doors at the back permit complete access.

The engine is equipped with an oil pan, coolant heaters and an ambient air temperature sensor. The battery is enclosed in a lockable box and is equipped with a battery warmer.

The arctic weather package also features deicer injector to prevent them from icing. Fuel and hydraulic tank heaters, and a hydraulic powered hose reel. One of the back doors features a hose window for routing hoses out of the container. To retain heat, the hose window is fitted with rubber flaps and a metal door on separate skid that is pulled in and out of the container by a dual drum hydraulic winch.
